European Commission to launch Digital Opportunity Scheme

The European Commission is planning to launch a pilot Digital Opportunity Scheme in the course of 2018. Running within the scope of the Erasmus + programme, the scheme promotes the development of digital skills through cross-border traineeships. Students taking part in the scheme will receive hands-on experience in such fields as cybersecurity, data analytics, artificial intelligence, programming and software development. The scheme will be endowed with a €10 million budget from Horizon 2020.
